1974-1975 Index to Optical Engineering

Volume Index

Volume 13, No. 1 (1974)

Optical Engineering (Guest Editorial) E. R. Schildkraut 4
Air Pollution Field Studies with a Raman Lidar, H. P. DeLong 5
Single-Ended Atmospheric Transmissometer, Donald A. Leonard, Bernard Caputo . . . 10
Long Path Infrared Spectroscopic Detection of Atmospheric Pollutants, Tomas B. Hirschfeld 15
Compact Derotator Design D. S. L. Durie 19
Theory and Principles of Monochromators, Spectrometers and Spectrographs, M. V. R. K. Murty 23
Bore Hole Cameras, Jacob Politch 40
Thermal and Ultrasonic Properties of Hot-Pressed Cadmium Sulfide and Hot-Pressed Magnesium Fluoride, M. Jirmanus, N. Saba-Jirmanus, W. M. Chu Wang, H. H. Sample, K. A. McCarthy 44
Fiber Optic Cable Test Evaluation, Robert L. Lebduska 49

Volume 13, No. 2 (1974)

Optical Engineering at AVCO Everett Research Laboratory (Guest Editorial), I. Itzkan 74
Remote Probing of a Volume at Finite Conjugates, J. L. Munroe 79
Useful Beam Quality by Design Curves for Unstable Resonators, M. M. Weiner 87
Computer Program for Atmospheric Infrared Transmission and Background Calculations, Gerald M. Daniels 92
Airborne Telescope-Camera System for High-Resolution Reentry Vehicle Photography, Gerald M. Daniels, Gordon L. Dryden . . 98
Improved Acquisition of Targets Seen against Daylight Sky, Gurdon R. Abell, George Philippou. . . 105
Applications of Optical Instrumentation in Medicine (Guest Editorial), William R. Hendee, William C. Zarnstorff. 116
Coded Aperture Gamma-Ray Imaging with Stochastic Apertures, A.Z.Akcasu, R.S.May, G.F.Knoll, W.L.Rogers, K.F.Koral, L.W.Jones 117
Nuclear Medicine Imaging with Pressurized Multiwire Proportional Chambers, Leon Kaufman, L.Blumin, R.Cavalieri, V.Perez-Mendez, Gerald Stoker 126
Transfer Functions for Xeroradiographs and Electronic Image Enhancement Systems, Robert A.Kilgore, Earle C.Gregg, P.S.Rao130
Use of General Description of Radiological Tranmission Image for Categorizing Image Enhancement Procedures, C.A.Mistretta.134
Hypodermic Fiberscope, Max Epstein . . 139
Focused Shadowgraph Visualization of Boundary-Layer Transition in Aeroballistic Range Studies, O. H. Bock. 143
Detection of Image Coincidence in Stereo Pairs Using Phase Correlation, V. P. Bennett, N. Balasubramanian. 147
Application of Lock-In Amplifier for Detecting Nanosecond Dye Laser Pulses, Elliot F. Wyner, John A. Sousa, Joseph F. Roach.154
Fabrication of Extreme Ultraviolet Glanding Incidence Telescope, Charles M. Fleetwood, John D. Mangus. 159
Standard for Passive Night Vision Devices for Law Enforcement Use, Joseph C. Richmond 162

Volume 13, No. 3 (1974)

Optical and Digital Information Processing (Guest Editorial), A. A. Sawchuk 172
Spatial Filtering by Digital Holography, K. Campbell, G. W. Wecksung, C. R. Mansfield. 175
Recent Approaches to Computer-Generated Holograms, D. C. Chu, J. R. Fienup . . 189
Mathematical Operations by Optical Processing, S. H. Lee 196
Restoration of Radiologic Images by Optical Spatial Filtering, , G. A. Krusos 208
Signal/Noise in Analog and Binary Holograms, T. C. Strand 219
Hybrid Image Processor, D. Casasent . . . 228
Prom Device in Optical Processing Systems, S. Iwasa, J. Feinleib. 235
Optical-Digital Image Processing System, H. Stark 243
Optical-Digital System for Automatic Processing of Chest X-Rays, E. I. Hall, R. P. Kruger, A. F. Turner 250
Image Processing in Signal-Dependent Noise, J. F. Walkup, R. C. Choens 258
Digital Processing of Synthetic Aperture Optical Imagery, W. T. Rhodes 267
Lens-Measuring Instrument Engineered for People, C. H. Chandler 275
Generation of Pseudo Fizeau Fringes on Large Objects Using Stereo Pairs, V. P. Bennett, N. Balasubramanian . . . 279

Volume 13, No. 4 (1974)

History of Optics at Honeywell Radiation Center (Guest Editorial) Irving R. Abel 288
Skylab Multispectral Scanner (S-192)—Optical Design and Operational Imagery, I. R. Abel, B. R. Reynolds. 292
Monte Carlo Approach to Optical Analysis, Tien S. Chou. 299
Lower Atmosphere Composition and Temperature Experiment, W. R. Williamson, D. R. Shafer, D. C. Dilworth. 303
High Performance, Wide Bandwidth (Hg,Cd)Te Detectors, V. J. Mazurczyk, R. N. Graney, J. B. McCullough 307
(Hg,Cd)Te Photodiodes for Communication Systems, T. Koehler, P. J. McNally . . . 312
Cryogenic Interferometer Spectrometer, C.R.Bohne, L.B.Harkless, B.K.Yap . . . 316
Application of Injection Laser as Reference Source in Cryogenic Interferometry, Steven P. Tomczak 322
Some Observations of Empirical Mirror Scatter, R.P.Heinisch, R.P.Young 327
Anamorphic Laser Beam Shaper with Phase Step, David R. Shafer. 331
TV-Compatible Forward Looking Infrared, R. F. Anderson 335
Fixation Point Measurement by Oculometer Technique, John Merchant. 339
Rejection of Out-of-Field Optical Sources, B. K. Yap 343
Application of Local Reference Beam Holography to Study of Laser Beam Parameters, C. Roychoudhuri, B. J. Thompson . . . 347
System and Production Engineering of a Beryllium Optic, Gerald F. Marshall . . 354
Partial Coherence in Imaging Systems, D. Nyyssonen 362

Volume 13, No. 5 (1974)

Modern Optical Communications (Guest Editorial), Warren A. Birge 372
Optical Communications in Space, Monte Ross 374
Wideband He-Ne Laser Communication System Suitable for Transmission of Color Television and Data, Yoh-Han Pao, John W. Allen, Paul C. Claspy 383
Application of GaAs Lasers and Silicon Avalanche Detectors to Optical Communications, B. E. Kincaid, S. Cowen, D. Campbell 389
Short-Range Optical Transmission System for Television Signals, Ed Freeman, Gerard Forsberg. 396
Tactical Optical Communications Set, Larry Dworkin, Louis Coryell, Warren A. Birge, Richard J. Wangler 401
Optical Communication Systems for Short-Haul Applications, L. E. Wood 409
Heterojunction Laser Diodes for Room Temperature Operation, H. Kressel, H. F. Lockwood, I. Ladany, M. Ettenberg 416
Review of Fiber Optical Transmission Systems, M. DiDomenico, Jr. 423
Holographic Data Storage and Retrieval, R. H. Nelson, A. Vander Lugt, R. G. Zech 429
Holographic Moving Map Display, B. R. Clay, D. A. Gore 435
Coherent Optics Potential Applications to Mapping, Robert D. Leighty. 440
Apodization of Coherent Imaging Systems, Leonard S. Gruber, Brian J.Thompson . 451
Amplitude Distribution Measurement Using Heterodyne Interferometry and its Application to Position Sensing, Jean Louis Meyzonnette, N. Balasubramanian . . . 455
Sampling Aperture for Linear Microdensitometry, Richard E. Swing. 460

Volume 13, No. 6 (1974)

Laser Spectroscopy (Guest Editorial), Shaoul Ezekiel, Stanley M. Klainer . . . 474
Impact of Lasers in Spectroscopy, Jeffrey L. Steinfeld 476
Holographic Spectroscopy, H. J. Caulfield 481
Opto-Acoustic Spectroscopy, C. Forbes Dewey, Jr. 483
Applications of Lasers to Kinetic Spectroscopy, Paul Houston. 489
Laser Induced Fluorescent Decay Spectra—New Form of Environmental Signature, R. M. Measures, W. R. Houston, D. G. Stephenson 494
Raman Technique for Remote Measurement of Aqueous Acid Solutions, Donald D. Dylis. 502
Laser Isotope Separation, Rolf W.F.Gross.506
Tunable Infrared Lasers, K. W. Nill. . . . 516
Scanning Single Frequency CW Dye Laser Techniques for High-Resolution Spectroscopy, John P. Goldsborough. 523

1974-1975 Index to Optical Engineering

Volume Index

Volume 13, No. 1 (1974)

Optical Engineering (Guest Editorial) E. R. Schildkraut 4
Air Pollution Field Studies with a Raman Lidar, H. P. DeLong 5
Single-Ended Atmospheric Transmissometer, Donald A. Leonard, Bernard Caputo . . . 10
Long Path Infrared Spectroscopic Detection of Atmospheric Pollutants, Tomas B. Hirschfeld 15
Compact Derotator Design D. S. L. Durie 19
Theory and Principles of Monochromators, Spectrometers and Spectrographs, M. V. R. K. Murty 23
Bore Hole Cameras, Jacob Politch 40
Thermal and Ultrasonic Properties of Hot-Pressed Cadmium Sulfide and Hot-Pressed Magnesium Fluoride, M. Jirmanus, N. Saba-Jirmanus, W. M. Chu Wang, H. H. Sample, K. A. McCarthy 44
Fiber Optic Cable Test Evaluation, Robert L. Lebduska 49

Volume 13, No. 2 (1974)

Optical Engineering at AVCO Everett Research Laboratory (Guest Editorial), I. Itzkan 74
Remote Probing of a Volume at Finite Conjugates, J. L. Munroe 79
Useful Beam Quality by Design Curves for Unstable Resonators, M. M. Weiner 87
Computer Program for Atmospheric Infrared Transmission and Background Calculations, Gerald M. Daniels 92
Airborne Telescope-Camera System for High-Resolution Reentry Vehicle Photography, Gerald M. Daniels, Gordon L. Dryden . . 98
Improved Acquisition of Targets Seen against Daylight Sky, Gurdon R. Abell, George Philippou. . . 105
Applications of Optical Instrumentation in Medicine (Guest Editorial), William R. Hendee, William C. Zarnstorff. 116
Coded Aperture Gamma-Ray Imaging with Stochastic Apertures, A.Z.Akcasu, R.S.May, G.F.Knoll, W.L.Rogers, K.F.Koral, L.W.Jones 117
Nuclear Medicine Imaging with Pressurized Multiwire Proportional Chambers, Leon Kaufman, L.Blumin, R.Cavalieri, V.Perez-Mendez, Gerald Stoker 126
Transfer Functions for Xeroradiographs and Electronic Image Enhancement Systems, Robert A.Kilgore, Earle C.Gregg, P.S.Rao130
Use of General Description of Radiological Tranmission Image for Categorizing Image Enhancement Procedures, C.A.Mistretta.134
Hypodermic Fiberscope, Max Epstein . . 139
Focused Shadowgraph Visualization of Boundary-Layer Transition in Aeroballistic Range Studies, O. H. Bock. 143
Detection of Image Coincidence in Stereo Pairs Using Phase Correlation, V. P. Bennett, N. Balasubramanian. 147
Application of Lock-In Amplifier for Detecting Nanosecond Dye Laser Pulses, Elliot F. Wyner, John A. Sousa, Joseph F. Roach.154
Fabrication of Extreme Ultraviolet Glanding Incidence Telescope, Charles M. Fleetwood, John D. Mangus. 159
Standard for Passive Night Vision Devices for Law Enforcement Use, Joseph C. Richmond 162

Volume 13, No. 3 (1974)

Optical and Digital Information Processing (Guest Editorial), A. A. Sawchuk 172
Spatial Filtering by Digital Holography, K. Campbell, G. W. Wecksung, C. R. Mansfield. 175
Recent Approaches to Computer-Generated Holograms, D. C. Chu, J. R. Fienup . . 189
Mathematical Operations by Optical Processing, S. H. Lee 196
Restoration of Radiologic Images by Optical Spatial Filtering, , G. A. Krusos 208
Signal/Noise in Analog and Binary Holograms, T. C. Strand 219
Hybrid Image Processor, D. Casasent . . . 228
Prom Device in Optical Processing Systems, S. Iwasa, J. Feinleib. 235
Optical-Digital Image Processing System, H. Stark 243
Optical-Digital System for Automatic Processing of Chest X-Rays, E. I. Hall, R. P. Kruger, A. F. Turner 250
Image Processing in Signal-Dependent Noise, J. F. Walkup, R. C. Choens 258
Digital Processing of Synthetic Aperture Optical Imagery, W. T. Rhodes 267
Lens-Measuring Instrument Engineered for People, C. H. Chandler 275
Generation of Pseudo Fizeau Fringes on Large Objects Using Stereo Pairs, V. P. Bennett, N. Balasubramanian . . . 279

Volume 13, No. 4 (1974)

History of Optics at Honeywell Radiation Center (Guest Editorial) Irving R. Abel 288
Skylab Multispectral Scanner (S-192)—Optical Design and Operational Imagery, I. R. Abel, B. R. Reynolds. 292
Monte Carlo Approach to Optical Analysis, Tien S. Chou. 299
Lower Atmosphere Composition and Temperature Experiment, W. R. Williamson, D. R. Shafer, D. C. Dilworth. 303
High Performance, Wide Bandwidth (Hg,Cd)Te Detectors, V. J. Mazurczyk, R. N. Graney, J. B. McCullough 307
(Hg,Cd)Te Photodiodes for Communication Systems, T. Koehler, P. J. McNally . . . 312
Cryogenic Interferometer Spectrometer, C.R.Bohne, L.B.Harkless, B.K.Yap . . . 316
Application of Injection Laser as Reference Source in Cryogenic Interferometry, Steven P. Tomczak 322
Some Observations of Empirical Mirror Scatter, R.P.Heinisch, R.P.Young 327
Anamorphic Laser Beam Shaper with Phase Step, David R. Shafer. 331
TV-Compatible Forward Looking Infrared, R. F. Anderson 335
Fixation Point Measurement by Oculometer Technique, John Merchant. 339
Rejection of Out-of-Field Optical Sources, B. K. Yap 343
Application of Local Reference Beam Holography to Study of Laser Beam Parameters, C. Roychoudhuri, B. J. Thompson . . . 347
System and Production Engineering of a Beryllium Optic, Gerald F. Marshall . . 354
Partial Coherence in Imaging Systems, D. Nyyssonen 362

Volume 13, No. 5 (1974)

Modern Optical Communications (Guest Editorial), Warren A. Birge 372
Optical Communications in Space, Monte Ross 374
Wideband He-Ne Laser Communication System Suitable for Transmission of Color Television and Data, Yoh-Han Pao, John W. Allen, Paul C. Claspy 383
Application of GaAs Lasers and Silicon Avalanche Detectors to Optical Communications, B. E. Kincaid, S. Cowen, D. Campbell 389
Short-Range Optical Transmission System for Television Signals, Ed Freeman, Gerard Forsberg. 396
Tactical Optical Communications Set, Larry Dworkin, Louis Coryell, Warren A. Birge, Richard J. Wangler 401
Optical Communication Systems for Short-Haul Applications, L. E. Wood 409
Heterojunction Laser Diodes for Room Temperature Operation, H. Kressel, H. F. Lockwood, I. Ladany, M. Ettenberg 416
Review of Fiber Optical Transmission Systems, M. DiDomenico, Jr. 423
Holographic Data Storage and Retrieval, R. H. Nelson, A. Vander Lugt, R. G. Zech 429
Holographic Moving Map Display, B. R. Clay, D. A. Gore 435
Coherent Optics Potential Applications to Mapping, Robert D. Leighty. 440
Apodization of Coherent Imaging Systems, Leonard S. Gruber, Brian J.Thompson . 451
Amplitude Distribution Measurement Using Heterodyne Interferometry and its Application to Position Sensing, Jean Louis Meyzonnette, N. Balasubramanian . . . 455
Sampling Aperture for Linear Microdensitometry, Richard E. Swing. 460

Volume 13, No. 6 (1974)

Laser Spectroscopy (Guest Editorial), Shaoul Ezekiel, Stanley M. Klainer . . . 474
Impact of Lasers in Spectroscopy, Jeffrey L. Steinfeld 476
Holographic Spectroscopy, H. J. Caulfield 481
Opto-Acoustic Spectroscopy, C. Forbes Dewey, Jr. 483
Applications of Lasers to Kinetic Spectroscopy, Paul Houston. 489
Laser Induced Fluorescent Decay Spectra—New Form of Environmental Signature, R. M. Measures, W. R. Houston, D. G. Stephenson 494
Raman Technique for Remote Measurement of Aqueous Acid Solutions, Donald D. Dylis. 502
Laser Isotope Separation, Rolf W.F.Gross.506
Tunable Infrared Lasers, K. W. Nill. . . . 516
Scanning Single Frequency CW Dye Laser Techniques for High-Resolution Spectroscopy, John P. Goldsborough. 523

Etalon/Grating Synchronized Scanning of Narrowband Pulsed Dye Laser, Gary K. Klauminzer 528
Frequency Stabilization of CE Dye Laser, R.E.Grove, F.Y.Wu, S.Ezekiel. 531
Unobscured Aperture Stigmatic Telescopes, Rubin Gelles. 534
Coded Apertures Derived from Fresnel Zone Plate, H.H.Barrett, W.W.Stoner, D.T.Wilson, G.D.DeMeester 539
Catadioptric Magnifier, Helmut Weiss . . 550
Microdensitometer without Lens Optics for Film MTF Evaluations, Stefan Johansson, Klaus Biedermann. 553
Errata: Restoration of Radiologic Images, George A. Krusos 522

Volume 14, No. 1 (1975)

Infrared Today and Tomorrow—Plus 11 Years (Guest Editorial), Irving J. Spiro 5
Performance Evaluation of Scanning IR Optical Systems, L. G. Neuweg 6
Design Tradeoffs for Scanning Infrared Sensors, Rudolf Marloth 15
Infrared Detectors—An Overview, R. B. Emmons, S. R. Hawkins, K. F. Cuff 21
Infrared Atmospheric Effects, C. M. Randall 31
Status of LWIR Spaceborne Sensor Calibration, Rex Lewis, Chris Horgen. 38
Deflection of Circular Scanning Mirror under Angular Acceleration, D.A.Conrad 46
State-of-the-Art for Thermal Imaging, J. M. Lloyd 50
Cryogenic Coolers for IR Systems, R. W. Breckenridge, Jr. 57
Photo-Optics in Southern Rocky Mountain Region (Guest Editorial), J. E. Durrenberger 63
Cinematography of Solar Intensity, Velocity, and Magnetic Fields, Jacques M. Beckers, Larry Dickson, Donald Woodman. 64
Use of Multiple Cavity Laser Holographic System for EBW Analysis, M. J. Landry, A. E. McCarthy 69
Computerized Image Analysis at Los Alamos Scientific Laboratory, D. H. Janney, B. R. Hunt 73
Image Intensification and Video Recording System for Astronomical Observations, Marvin M. Hoffman, Wm. Mort Sanders, Donald H. Liebenberg 76
12-Inch Aperture Folded MTF Analyzer for Infinite Conjugate Testing, Walter E. Woehl 81
Laser Polar Nephelometer for Airborne Measurements of Aerosol Optical Properties, G.W.Grams, A.J.Dascher, C.M.Wyman . . 85
Diffraction of Light by Sound Waves in Optically Isotropic Media, Virendra N. Mahajan, Jack D. Gaskill 91

Volume 14, No. 2 (1975)

Optics at Perkin-Elmer (Guest Editorial), Earle B. Brown 104
Large Space Telescope, A.B.Wissinger . . 107
New Technique for Controlling Optical Mirror Shapes, R. M. Scott. 112
Laser Line-Scanning Sensors, W. F. Matthews, R. F. Jung 116
U.S. Air Force Aerial Camera Resolution Tester, C. C. Wheeler 120
Practice of Interferometry, Joseph Vrabel, Earle B. Brown 124
New Concepts in Projection Mask Aligners, A. Offner. 130
Orbiting Astronomical Observatory, Alan B. Wissinger 133
Thermal Infrared Lenses of High Aperture and Performance, Philip J. Rogers . . . 141
New Developments in Optical Fabrication Techniques, R. R. Rigby 145
Standards for Imaging Performance (Guest Editorial), David Dutton 149
ANSI, OTF Standard, Task Force and You (Guest Editorial), David C. Gilkeson . . 150
Interlaboratory Comparisons of MTF Measurements and Calculations and OTF Standards in Germany, Paul Kuttner 151
Progress in United Kingdom toward Objective Standards for Air Camera Lenses, A. C. Marchant 157
Standards of OTF in Japan, Teruji Ose, Kazumi Murata 161
Comparison of Results of Various OTF Calculation Programs, John Macdonald. . . . 166
Problems of OTF Standardization for Non-Perfect Imaging Devices, J. A. J. van Leunen 169
Terminology and Specifications—Some Unclear Aspects of Optics, Wm. H. Price . 172
Covering Factor of Optically Coated Silicon Solar Cells, E. Y. Wang 176
High Sensitivity Moiré Grid Technique for Studying Deformation in Large Objects, J. M. Burch, C. Forno 178
Errata: Rejection of Out-of-Field Optical Sources, B. K. Yap 185

Volume 14, No. 3 (1975)

Coherent Optical Systems (Guest Editorial), H. J. Caulfield 191
Optical Laboratory, Matt Lehmann. . . . 192
Synthetic Holograms and Kinoforms, Richard E. Haskell 195
Three-Dimensional Image Reconstruction from Longwave Holograms: Feasibility Study N. H. Farhat, A. K. Chua. 200
In vivo Applications of Holographic Microscopy, Mary E. Cox 206
Method to Measure Pulsed Infrared Laser Spectra by Means of Holography, W. Braun 208
Coherent Optics in Mapping (Guest Editorial), N. Balasubramanian, Robert D. Leighty .210
Coherent Optics in Mapping, N. Balasubramanian, Robert D. Leighty .211
New Real-Time Non-Coherent to Coherent Light Image Converter—The Hybrid Field Effect Liquid Crystal Light Valve, Jan Grinberg et al 217
Parallax Measurement Using Coherent Optics, Fred B. Rotz. 226
Holographic Techniques for Recording of Electrical Signals on Moving Storage Media, H. Rüll 232
Caustic and Analytical Illuminance Calculations for Model of Human Eye, David L. Shealy, Wm. M. Rosenblum 237
Automatic Background Compensation Device for Vidicons, C. L. Townsend, R. E. Lugo 241
Portable Instrument for Measuring Apparent Directional Reflectance, R. E. Oliver, J. K. Berry, J. A. Smith 244
Electronically Scannable Semiconductor Laser Device, J.R.Packard, J.M.Magnusson, H.U.Brueckner, W.H.Strehlow. 248
Electronic Scanning Spectrometer, A.W.Harrison, D.H.McArthur 251
Improved Oblique-Incidence Interferometer, P. Hariharan 257
High-Frequency Moiré Fringe Interpolation Using Electro-Optic Crystals, O.C.Jones, C.Forno. 259
Short Communications, Burt Clay 263
On Fringes of Defocusing & Fringes of Lateral Displacement, Brian J. Thompson . . . 264

Volume 14, No. 4 (1975)

Remote Sensing for Earth Observations, Yale H. Katz. 271
Defense Meteorological Satellite Program, David A. Nichols 273
Primary Optical Subsystem for DMSP Block 5D, David A. Nichols 279
DMSP Block 5D Special Meteorological Sensor H, Optical Subsystem, David A.Nichols 284
Scanning System Tradeoffs for Remote Optical Sensing from Geosynchronous Orbit, Philip J. Young 289
Optical Concept Generation for the Synchronous Earth Observatory Satellite, Joseph H. Oberheuser 295
Effects of Out-of-Field Radiation on Earth-Observing Telescopes, Philip J. Young . 305
Four- and Five-Band Multispectral Scanners for Landsat, Jack C. Lansing, R. W. Cline. 312
Solar Backscatter Ultraviolet and Total Ozone Mapping Spectrometer (SBUV/TOMS) for NIMBUS G, D. F. Heath, A. J. Krueger, H. A. Roeder, B. D. Henderson 323
Remote Measurement of Aerosol Particle Characteristics and Their Significance to Meteorology, J. G. Kuriyan 332
MK II Fraunhofer Line Discriminator (FLD II) for Airborne and Orbital Remote Sensing of Solar-Stimulated Luminescence, James A. Plascyk 339
Single-Lens Multiband Camera, Robert K. Brooke, Jr. 347
Recent Infrared Detector Developments for Future Remote Sensor Applications, D. P. Mathur. 351
Backscatter Reduction for Artificially Illuminated In-Water Camera Systems, R. B. Patterson 357
Design and Testing of Pneumatic Focus Servo for High-Speed Microdensitometer, David J. Cronin, Anthony F. Mirabito, Jerome S. Pepi. 366
Sensitivity Improvement by Step-Biasing in Holographic Interferometry, Mauro H. Zambuto, Amin Hanafy . . . 372
Apparent Rotational Amplification in Measurement Systems, Howard J. Okoomian . . 375

Volume 14, No. 5 (1975)

Holographic Applications (Guest Editorial), James C. Wyant 381
Particle Field Holography, J. D. Trolinger. 383
Holographic Recording Materials—Review, Stephen A. Benton 402
Holographic Optical Elements, D.H.Close .408
Designing New Generation of Analytical Instruments around New Types of Holographic Diffraction Grating, G.S.Hayat, J.Flamand, M.Lacroix, A.Grillo. 420
Computer-Generated Holograms as Generalized Optical Components, Olof Bryngdahl 426
Optical Image Subtraction, John F. Ebersole 436
Holographic Applications in Photogrammetry, N. Balasubramanian. 448
Holographic Memories, Gordon R.Knight .453

Holography Applied to Structural Components, Jon E. Sollid. 460
Flow Visualization Holography, J. D. Trolinger. 470
Review of Speckle Photography and Interferometry, Karl A. Stetson 482
Digital Processing of Annular Coded-Aperture Imagery, R. G. Simpson, H. H. Barrett, J. A. Subach, H. D. Fisher 490
Acoustical Holography, Byron R. Brenden. 495
High Resolution Microwave Holography and Imaging of Remote Moving Objects, N. H. Farhat 499
Negative Images in Stroboscopy, R. M. Shymko, Leon Glass. 506

Volume 14, No. 6 (1975)

Large Optical Systems (Guest Editorial), Richard J. Wollensak 513
Optical Fabrication of a Large Lightweight Mirror of Unusual Shape, Bertram L. Barlow 514
Large Aperture Ground Based Telescope Design and Fabrication, Dave Dodgen . . . 520
Testing of Convex Paraboloids Dave Dodgen 525
Analysis and Experimental Measurement of Straylight Suppression Systems for the Large Space Telescope, Charles L. Wyman, Donald B.Griner, Gary H.Hunt, Glenn B.Shelton.528
A Three-Mirror Space Telescope, Dietrich Korsch 533
Asymptote Analysis of a Large Optical System, John Bisbee 536
Fabrication and Test of 1.8-Meter-Diameter High Quality ULE Mirror, Richard J. Wollensak, Clarence A. Rose 539
Current Status of the MMT Optics, R. R. Shannon, G. M. Sanger 544
Design of Highly Stable Optical Support Structure, Michael H. Krim 552
Metal Mirrors in the Large, H. D. "Pete" Taylor 559
Addendum: Improved Oblique-Incidence Interferometer, P. Hariharan 535

Index of Authors

Volume 13 (1974) and Volume 14 (1975)

Abel, Irving R., 13:3:288, 13:4:292
Akcasu, A. Z., 13:2:117
Akell, Gurdon R., 13:2:105
Allen, John W., 13:5:383
Anderson, R. F., 13:4:335

Balasubramanian, N., 13:2:147, 13:3:279, 13:5:455, 14:3:210, 14:3:211, 14:5:448
Barlow, Bertram L., 14:6:514
Barrett, H. H., 13:6:539, 14:5:490
Beckers, Jacques M., 14:1:64
Bennett, V. P., 13:2:147, 13:3:279
Benton, Stephan A., 14:5:402
Berry, J. K., 14:3:244
Biedermann, Klaus, 13:6:553
Birge, Warren A., 13:5:372, 13:5:401
Bisbee, John, 14:6:536
Blumin, L., 13:2:126
Bock, O. H., 13:2:143
Bohne, C. R., 13:4:316
Boswell, Donald, 14:3:217
Braun, W. M., 14:3:208
Breckenridge, R. W., Jr., 14:1:57
Brenden, Byron B., 14:5:495
Brooke, Robert K., Jr., 14:4:347
Brown, Earle, B., 14:2:104, 14:2:124
Brueckner, H. U., 14:3:248
Bryngdahl, Olof, 14:5:426
Burch, J. M., 14:2:178

Campbell, D., 13:5:389
Campbell, K., 13:3:175
Caputo, Bernard, 13:1:10
Casasent, D., 13:3:228
Caulfield, H. J., 13:6:481, 14:3:191
Cavalieri, R., 13:2:126
Chandler, C. H., 13:3:275
Choens, R. C., 13:3:258
Chou, Tien S., 13:4:299
Chu, D. C., 13:3:189
Chu Wang, W. M., 13:1:44
Chua, A. K., 14:3:200
Claspy, Paul C., 13:5:383
Clay, Burt R., 13:5:435, 14:3:263
Cline, R. W., 14:4:312
Close, D. H., 14:5:408
Conrad, D. A., 14:1:46
Coryell, Louis, 13:5:401
Cowen, S., 13:5:389
Cox, Mary E., 14:3:206
Cronin, David J., 14:4:366
Cuff, K. F., 14:1:21

Daniels, Gerald M., 13:2:92, 13:2:98
Dascher, A. J., 14:1:85
DeLong, H. P., 13:1:5

Subject Index

Acid solutions, Raman technique for remote measurement of aqueous, 13:6:502
Acoustical holography, 14:5:495
Aerial camera resolution tester, U.S. Air Force 14:2:120
Aeroballistic range studies, focused shadowgraph visualization of boundary-layer transition in, 13:2:143
Aerosol optical properties, laser polar nephelometer for airborne measurements of, 14:1:85
Aerosol particle characteristics and their significance to meteorology, remote measurement of, 14:4:332
Air camera lenses, progress in UK toward objective standards for, 14:2:157
Air pollution field studies with a Raman lidar, 13:1:5
Airborne and orbital remote sensing of solar-stimulated luminescence, MK II Fraunhofer line discriminator, 14:4:339
Airborne measurements of aerosol optical properties, laser polar nephelometer for, 14:1:85
Airborne telescope-camera system for high resolution reentry vehicle photography, 13:2:98
Amplification in measurement systems, apparent rotational, 14:4:375
Amplifier for detecting nanosecond dye laser pulses, application of a lock-in, 13:2:154
Amplitude distribution measurement using heterodyne interferometry and its application to position sensing, 13:5:455
Analog and binary holograms, signal/noise in, 13:3:219
Analysis and experimental measurement of straylight suppression systems for large space telescope, 14:6:528
Analysis, Monte Carlo approach to optical, 13:4:299
Analysis of large optical system, asymptote, 14:6:536
Analysis, use of multiple cavity laser holographic system for exploding bridge wire, 14:1:69
Analytical illuminance calculations for model of human eye, caustic and, 14:3:237
Analytical instruments around new types of holographic diffraction grating, designing a new generation of, 14:5:420
Analyzer for infinite conjugate testing, 12-inch aperture folded MTF, 14:1:81
Anamorphic laser beam shaper with a phase step, 13:4:331
Angular acceleration, deflection of circular scanning mirror under, 14:1:46
Annular coded-aperture imagery, digital processing of, 14:5:490
ANSI, OTF standard, task force, and you, 14:2:150
Aperture and performance, thermal infrared lenses of high, 14:2:141
Aperture folded MTF analyzer for infinite conjugate testing, 12-inch, 14:1:81
Aperture gamma-ray imaging with stochastic apertures, coded, 13:2:117
Aperture for linear microdensitometry, sampling, 13:5:460
Aperture ground based telescope design and fabrication, large-, 14:6:520
Aperture imagery, digital processing of annular coded-, 14:5:490
Aperture optical imagery, digital processing of synthetic, 13:3:267
Aperture stigmatic telescopes, unobscured, 13:6:534
Apertures, coded aperture gamma-ray imaging with stochastic, 13:2:117
Apertures derived from Fresnel zone plate, coded, 13:6:539
Apodization of coherent imaging systems, 13:5:451
Apparent directional reflectance, portable instrument for measuring, 14:3:244
Apparent rotational amplification in measurement systems, 14:4:375
Application of GaAs laser and silicon avalanche detectors to optical communications, 13:5:389
Application of injection laser as reference source in cryogenic interferometry, 13:4:322
Application of local reference beam holography to study of laser beam parameters, 13:4:347
Application of lock-in amplifier for detecting nanosecond dye laser pulses, 13:2:154
Application to position sensing, amplitude distribution measurement using heterodyne interferometry and its, 13:5:455
Applications, holographic, 14:5:381
Applications in photogrammetry, holographic, 14:5:448
Applications of holographic microscopy, in vivo, 14:3:206
Applications of lasers to kinetic spectroscopy, 13:6:489
Applications of optical instrumentation in medicine, 13:2:116
Applications, optical communication systems for short-haul, 13:5:409
Applications, recent infrared detector developments for future remote sensor, 14:4:351
Applications to mapping, coherent optics—potential, 13:5:440
Approaches to computer generated holograms, recent, 13:3:189
Aqueous acid solutions, Raman technique for remote measurement of, 13:6:502
Artificially illuminated in-water camera systems, backscatter reduction for, 14:4:357
Astronomical observations, image intensification and video recording system for, 14:1:76
Astronomical observatory, orbiting, 14:2:133

Asymptote analysis of a large optical system, 14:6:536
Atmosphere composition and temperature experiment, lower, 13:4:303
Atmospheric effects, infrared, 14:1:31
Atmospheric infrared transmission and background calculations, computer program for, 13:2:92
Atmospheric pollutants, long path infrared spectroscopic detection of, 13:1:15
Atmospheric transmissometer, single-ended, 13:1:10
Automatic background compensation device for vidicons, 14:3:241
Automatic processing of chest x-rays, optical-digital system for, 13:3:250
Avalanche detectors to optical communications, application of GaAs laser and silicon, 13:5:389
Avco Everett Research Laboratory, optical engineering at, 13:2:74

Background calculations, computer program for atmospheric infrared transmission and, 13:2:92
Background compensation device for vidicons, automatic, 14:3:241
Backscatter reduction for artificially illuminated in-water camera systems, 14:4:357
Backscatter ultraviolet and total ozone mapping spectrometer (SBUV/TOMS) for NIMBUS G, Solar, 14:4:323
Bandwidth (Hg,Cd)Te detectors, high performance wide, 13:4:307
Beam holography to study of laser beam parameters, application of local reference, 13:4:347
Beam parameters, application of local reference beam holography to study of laser, 13:4:347
Beam quality by design curves for unstable resonators, useful, 13:2:87
Beam shaper with phase step, anamorphic laser, 13:4:331
Beryllium optic, system and production engineering of a, 13:4:354
Binary holograms, signal/noise in analog and, 13:3:219
Boundary-layer transition in aeroballistic range studies, focused shadowgraph visualization of, 13:2:143
Bore hole cameras, 13:1:40
Bridge wire analysis, use of multiple cavity laser holographic system for exploding, 14:1:69

Cable test evaluation, fiber optic, 13:1:49
Cadmium sulfide and hot-pressed magnesium fluoride, thermal and ultrasonic properties of hot-pressed, 13:1:44
Calculation programs, comparison of results of various OTF, 14:2:166
Calculations and OTF standards in Germany, interlaboratory comparisons of MTF measurements and, 14:2:151
Calculations for model of human eye, caustic and analytical illuminance, 14:3:237
Calibration, status of long wavelength infrared spaceborne sensor, 14:1:38
Camera lenses, progress in UK toward objective standards for air, 14:2:157
Camera resolution tester, U.S.Air Force aerial, 14:2:120
Camera, single-lens multiband, 14:4:347
Camera, system for high-resolution reentry vehicle photography, airborne telescope-, 13:2:98
Camera systems, backscatter reduction for artificially illuminated in-water, 14:4:357
Cameras, bore hole, 13:1:40
Catadioptric magnifier, 13:6:550
Categorizing image enhancement procedures, use of a general description of the radiological transmission image for, 13:2:134
Caustic and analytical illuminance calculations for model of human eye, 14:3:237
Cavity laser holographic system for exploding bridge wire analysis, use of multiple,14:1:69
Cells, covering factor of optically coated silicon solar, 14:2:176
Chambers, nuclear medicine imaging with pressurized multiwire proportional, 13:2:126
Characteristics and their significance to meteorology, remote measurement of aerosol particle, 14:4:332
Chest x-rays, optical-digital system for automatic processing of, 13:3:250
Cinematography of solar intensity, velocity, and magnetic fields, 14:1:64
Circular scanning mirror under angular acceleration, deflection of, 14:1:46
Coated silicon solar cells, covering factor of optically, 14:2:176
Coded aperture gamma-ray imaging with stochastic apertures, 13:2:117
Coded-aperture imagery, digital processing of annular, 14:5:490
Coded apertures derived from Fresnel zone plate, 13:6:539
Coherence in imaging systems, partial, 13:4:362
Coherent imaging systems, apodization of, 13:5:451
Coherent light image converter—hybrid field effect crystal light valve, new real-time noncoherent to, 14:3:217
Coherent optical systems, 14:3:191
Coherent optics in mapping, 14:3:210
Coherent optics in mapping, 14:3:211
Coherent optics, parallax measurement using, 14:3:226
Coherent optics—potential applications to mapping, 13:5:440
Color television and data, wideband He-Ne laser communication system suitable for transmission of, 13:5:383
Communication system suitable for transmission of color television and data, wideband He-Ne laser, 13:5:383
Communication systems for short-haul applications, optical, 13:5:409
Communication systems, (Hg,Cd)Te photodiodes for, 13:4:312
Communications, application of GaAs laser and silicon avalanche detectors to optical, 13:5:389
Communications in space, optical, 13:5:374
Communications, modern optical, 13:5:372
Communications set, tactical optical, 13:5:401
Comparisons of MTF measurements and calculations and OTF standards in Germany, interlaboratory, 14:2:151
Compact derotator design, 13:1:19
Comparison of results of various OTF calculation programs, 14:2:166
Compensation device for vidicons, automatic background, 14:3:241
Components, computer-generated holograms as generalized optical, 14:5:426
Components, holography applied to structural, 14:5:460
Composition and temperature experiment, lower atmosphere, 13:4:303
Computer generated holograms as generalized optical components, 14:5:426
Computer generated holograms, recent approaches to, 13:3:189
Computer program for atmospheric infrared transmission and background calculations, 13:2:92
Computerized image analysis at Los Alamos Scientific Laboratory, 14:1:73
Concept generation for synchronous earth observatory satellite, optical, 14:4:295
Concepts in projection mask aligners, new, 14:2:130
Conjugate testing, 12-inch aperture folded MTF analyzer for infinite, 14:1:81
Controlling optical mirror shapes, new technique for, 14:2:112
Converter—hybrid field effect crystal light valve, new real-time non-coherent to coherent light image, 14:3:217
Convex paraboloids, testing of, 14:6:525
Coolers for infrared systems, cryogenic, 14:1:57
Covering factor of optically coated silicon solar cells, 14:2:176
Cryogenic coolers for infrared systems, 14:1:57
Cryogenic interferometer spectrometer, 13:4:316
Cryogenic interferometry, application of injection laser as reference scurce in, 13:4:322
Crystal light valve, new real-time non-coherent to coherent light image converter—hybrid field effect, 14:3:217
Crystals, high frequency moire fringe interpolation using electro-optic, 14:3:259
Current status of MMT optics, 14:6:544
CW dye laser, frequency stabilization of a, 13:6:531
CW dye laser techniques for high-resolution spectroscopy, scanning single-frequency, 13:6:523

Data storage and retrieval, holographic, 13:5:429
Data, wideband He-Ne laser communication system suitable for transmission of color television and, 13:5:383
Daylight sky, improved acquisition of targets seen against the, 13:2:105
Decay spectra—new form of environment signature, laser-induced fluorescent, 13:6:494
Defense meteorological satellite program, 14:4:273
Deflection of circular scanning mirror under angular acceleration, 14:1:46
Defocusing and fringes of lateral displacement, on fringes of, 14:3:264
Deformation in large objects, high sensitivity moire grid technique for studying, 14:2:178
Derotator design, a compact, 13:1:19
Design and fabrication, large-aperture ground-based telescope, 14:6:520
Design and operational imagery, Skylab multispectral scanner (S-192), optical, 13:4:292
Design and testing of pneumatic focus servo for high-speed microdensitometer, 14:4:366
Design curves for unstable resonators, useful beam quality by, 13:2:87
Design of highly stable optical support structure, 14:6:552
Design tradeoffs for scanning infrared sensors, 14:1:15
Designing new generation of analytical instruments around new types of holographic diffraction grating, 14:5:420
Detection of atmospheric pollutants, long path infrared, spectroscopic, 13:1:15
Detection of image coincidence in stereo pairs using phase correlation, 13:2:147
Detector developments for future remote sensor applications, recent infrared, 14:4:351
Detectors—an overview, infrared, 14:1:21
Detectors, high performance wide bandwidth (Hg,Cd)Te, 13:4:307
Detectors to optical communications, application of GaAs laser and silicon avalanche, 13:5:389
Developments for future remote sensor applications, recent infrared detector, 14:4:351
Developments in optical fabrication techniques, new, 14:2:145
Device, electronically scannable semiconductor laser, 14:3:248
Device for vidicons, automatic background compensation, 14:3:241
Devices, problems of OTF standardization for non-perfect imaging, 14:2:169
Diffraction grating, designing new generation of analytical instruments around new types of holographic, 14:5:420
Diffraction of light by sound waves in optically isotropic media, 14:1:91
Digital holography, spatial filtering by, 13:3:175
Digital image processing system, optical-, 13:3:243
Digital information processing, optical and, 13:3:172
Digital processing of annular coded-aperture imagery, 14:5:490
Digital processing of synthetic aperture optical imagery, 13:3:267
Digital system for automatic processing of chest x-rays, optical-, 13:3:250
Diodes for room-temperature operation, heterojunction laser, 13:5:416
Directional reflectance, portable instrument for measuring apparent, 14:3:244
Discriminator (FLD II) for airborne and orbital remote sensing of solar-stimulated luminescence, MK II Fraunhofer line, 14:4:339
Displacement, on fringes of defocusing and fringes of lateral, 14:3:264
Display, holographic moving map, 13:5:435
Displays—a review, holographic, 14:5:402
Distribution measurement using heterodyne interferometry and its application to position sensing, amplitude, 13:5:455
DMSP Block 5D, primary optical subsystem for, 14:4:279
DMSP Block 5D special meteorological sensor H—optical subsystem, 14:4:284
Dye laser, etalon/grating synchronized scanning of a narrowband pulsed, 13:6:528
Dye laser, frequency stabilization of CW, 13:6:531
Dye laser pulses, application of lock-in amplifier for detecting nanosecond, 13:2:154
Dye laser techniques for high-resolution spectroscopy, scanning single-frequency CW, 13:6:523

Earth observations, remote sensing for, 14:4:271
Earth observatory satellite, optical concept generation for synchronous, 14:4:295
Earth-observing telescopes, effects of out-of-field radiation on, 14:4:305
Effects, infrared atmospheric, 14:1:31
Effects of out-of-field radiation on earth-observing telescopes, 14:4:305
Electrical signals on moving storage media, holographic techniques for recording of, 14:3:232
Electronic image enhancement systems, transfer functions of xeroradiographs and, 13:2:130
Electronic scanning spectrometer, 14:3:251
Electronically scannable semiconductor laser device, 14:3:248
Electro-optic crystals, high frequency moire fringe interpolation using, 14:3:259
Elements, holographic optical, 14:5:408
Empirical mirror scatter, some observations of, 13:4:327
Engineering of a beryllium optic, system and production, 13:4:354
Engineering, optical, 13:1:4
Enhancement systems, transfer functions of xeroradiographs and electronic image, 13:2:130
Environment signature, laser-induced fluorescent decay spectra—new form of, 13:6:494
Etalon/grating synchronized scanning of a narrowband pulsed dye laser, 13:6:528
Evaluation of scanning IR optical systems, performance, 14:1:6
Evaluations, microdensitometer without lens optics for film MTF, 13:6:553
Experiment, lower atmosphere composition and temperature, 13:4:303
Experimental measurement of straylight suppression systems for large space telescope, analysis and, 14:6:528
Exploding bridge wire analysis, use of multiple cavity laser holographic system for, 14:1:69
Extreme ultraviolet glancing incidence telescope, fabrication of an, 13:2:159
Eye, cuastic and analytical illuminance calculations for model of human, 14:3:237

Fabrication and test of 1.8 meter diameter high quality ULE mirror, 14:6:539
Fabrication, large-aperture ground-based telescope design and, 14:6:520
Fabrication of large lightweight mirror of unusual shape, optical, 14:6:514
Fabrication of extreme ultraviolet glancing incidence telescope, 13:2:159
Fabrication techniques, new developments in optical, 14:2:145
Factor of optically coated silicon solar cells, covering, 14:2:176
Feasibility study, three-dimensional image reconstruction from longwave holograms, 14:3:200
Fiber optic cable test evaluation, 13:1:49
Fiber optical transmission systems, review of, 13:5:423
Fiberscope, hypodermic, 13:2:139
Field effect crystal light valve, new real-time non-coherent to coherent light image converter—hybrid, 14:3:217
Fields, cinematography of solar intensity, velocity, and magnetic, 14:1:64
Film MTF evaluations, microdensitometer without lens optics for, 13:6:553
Filtering by digital holography, spatial, 13:3:175
Filtering, restoration of radiologic images by optical spatial, 13:3:208
Five-band multispectral scanners for Landsat, four- and, 14:4:312
Fixation point measurement by oculometer technique, 13:4:339
Fizeau fringes on large objects using stereo pairs, generation of pseudo, 13:3:279
FLD II for airborne and orbital remote sensing of solar-stimulated luminescence, MK II Fraunhofer line discriminator, 14:4:339
Flow visualization holography, 14:5:470
Fluorescent decay spectra—new form of environment signature, laser-induced, 13:6:494
Focus servo for high-speed microdensitometer, design and testing of pneumatic, 14:4:366
Focused shadowgraph visualization of boundary-layer transition in aeroballistic range studies, 13:2:143
Folded MTF analyzer for infinite conjugate testing, 12-inch aperture, 14:1:81
Forward looking infrared, TV-compatible, 13:4:335
Four- and five-band multispectral scanners for Landsat, 14:4:312
Fraunhofer line discriminator (FLD II) for airborne and orbital remote sensing of solar-stimulated luminescence, MK II, 14:4:339
Frequency CW dye laser techniques for high-resolution spectroscopy, scanning single-, 13:6:523
Frequency stabilization of a CW dye laser, 13:6:531
Fresnel zone plate, coded apertures derived from, 13:6:539
Fringe interpolation using electro-optic crystals, high frequency moire, 14:3:259
Fringes of defocusing and fringes of lateral displacement, on, 14:3:264
Fringes of lateral displacement, on fringes of defocusing and, 14:3:264
Fringes on large objects using stereo pairs, generation of pseudo Fizeau, 13:3:279
Future remote sensor applications, recent infrared detector developments for, 14:4:351

GaAs laser and silicon avalanche detectors to optical communications, application of, 13:5:389
Gamma-ray imaging with stochastic apertures, coded aperture, 13:2:117
Generalized optical components, computer-generated holograms as, 14:5:426
Generation for synchronous earth observatory satellite, optical concept, 14:4:295
Generation of analytical instruments around new types of holographic diffracting grating, designing a new, 14:5:420
Generation of pseudo Fizeau fringes on large objects using stereo pairs, 13:3:279
Geosynchronous orbit, scanning system tradeoffs for remote optical sensing from, 14:4:289
Germany, interlaboratory comparisons of MTF measurements and calculations and OTF standards in, 14:2:151
Glancing incidence telescope, fabrication of an extreme ultraviolet, 13:2:159
Grating, designing new generation of analytical instruments around new types of holographic diffraction, 14:5:420
Grating synchronized scanning of narrowband pulsed dye laser, etalon/, 13:6:528
Grid technique for studying deformation in large objects, high sensitivity moire, 14:2:178
Ground-based telescope design and fabrication, large-aperture, 14:6:520

He-Ne laser communication system suitable for transmission of color television and data, wideband, 13:5:383
Heterodyne interferometry and its application to position sensing, amplitude distribution measurement using, 13:5:455
Heterojunction laser diodes for room-temperature operation, 13:5:416
(Hg,Cd)Te detectors, high performance wide bandwidth, 13:4:307
(Hg,Cd)Te photodiodes for communication systems, 13:4:312
High aperture and performance, thermal infrared lenses of, 14:2:141
High frequency moire fringe interpolation using electro-optic crystals, 14:3:259
High performance wide bandwidth (Hg,Cd)Te detectors, 13:4:307
High quality ULE mirror, fabrication and test of 1.8 meter diameter, 14:6:539
High resolution microwave holography and imaging of remote moving objects, 14:5:499
High resolution reentry vehicle photography, airborne telescope-camera system for, 13:2:98
High resolution spectroscopy, scanning single-frequency CW dye laser techniques for, 13:6:523
High sensitivity moire grid technique for studying deformation in large objects, 14:2:178
High-speed microdensitometer, design and testing of pneumatic focus servo for a, 14:4:366
Highly stable optical support structure, design of, 14:6:552
History of optics at Honeywell Radiation Center, 13:4:288
Holograms—feasibility study, 3-dimensional image reconstruction from longwave, 14:3:200
Holograms and kinoforms, synthetic, 14:3:195
Holograms as generalized optical components, computer-generated, 14:5:426
Holograms, recent approaches to computer-generated, 13:3:189
Holograms, signal/noise in analog and binary, 13:3:219
Holographic applications, 14:5:381
Holographic applications in photogrammetry, 14:5:448
Holographic data storage and retrieval, 13:5:429
Holographic diffraction grating, designing new generation of analytical instruments around new types of, 14:5:420
Holographic displays—a review, 14:5:402
Holographic interferometry, sensitivity improvement by step biasing in, 14:4:372
Holographic memories, 14:5:453
Holographic microscopy, in vivo applications of, 14:3:206
Holographic moving map display, 13:5:435
Holographic optical elements, 14:5:408
Holographic recording materials—a review, 14:5:393
Holographic spectroscopy, 13:6:481
Holographic system for exploding bridge wire analysis, use of multiple cavity laser, 14:1:69
Holographic techniques for recording of electrical signals on moving storage media, 14:3:232
Holography, acoustical, 14:5:495
Holography and imaging of remote moving objects, high resolution microwave, 14:5:499
Holography applied to structural components, 14:5:460
Holography, flow visualization, 14:5:470
Holography, method to measure pulsed infrared laser spectra by means of, 14:3:208
Holography, particle field, 14:5:383
Holography, spatial filtering by digital, 13:3:175
Holography to study of laser beam parameters, application of local reference beam, 13:4:347
Honeywell Radiation Center, history of optics at, 13:4:288
Hot-pressed cadmium sulfide and hot-pressed magnesium fluoride, thermal and ultrasonic properties of, 13:1:44
Hot-pressed magnesium fluoride, thermal and ultrasonic properties of hot-pressed cadmium sulfide and, 13:1:44
Human eye, caustic and analytical illuminance calculations for model of the, 14:3:237
Hybrid field effect crystal light valve, new real time non-coherent to coherent light image converter—, 14:3:217
Hybrid image processor, 13:3:228
Hypodermic fiberscope, 13:2:139

Illuminance calculations for model of human eye, caustic and analytical, 14:3:237
Illuminated in-water camera systems, backscatter reduction for artificially, 14:4:357
Image analysis at Los Alamos Scientific Laboratory, computerized, 14:1:73
Image coincidence in stereo pairs using phase correlation, detection of, 13:2:147
Image converter—hybrid field effect crystal light valve, new real-time non-coherent to coherent light, 14:3:217
Image enhancement procedures, use of general description of radiological transmission image for categorizing, 13:2:134
Image enhancement systems, transfer functions of xeroradiographs and electronic, 13:2:130
Image for categorizing image enhancement procedures, use of general description of radiological transmission, 13:2:134
Image intensification and video recording system for astronomical observations, 14:1:76
Image processing in signal-dependent noise, 13:3:258
Image processing system, optical-digital, 13:3:243
Image processor, hybrid, 13:3:228
Image reconstruction from longwave holograms—feasibility study, three-dimensional, 14:3:200
Image subtraction, optical, 14:5:436
Imagery, digital processing of annular coded-aperture, 14:5:490
Imagery, digital processing of synthetic aperture optical, 13:3:267
Imagery, Skylab multispectral scanner (S-192) —optical design and operational, 13:4:292
Images by optical spatial filtering, restoration of radiologic, 13:3:208

Imaging devices, problems of OTF standardization for non-perfect, 14:2:169
Imaging of remote moving objects, high resolution microwave holography and, 14:5:499
Imaging performance, standards for, 14:2:149
Imaging, state-of-the-art for thermal, 14:1:50
Imaging systems, partial coherence in, 13:4:362
Imaging systems, apodization of coherent, 13:5:451
Imaging with pressurized multiwire proportional chambers, nuclear medicine,13:2:126
Imaging with stochastic apertures, coded aperture gamma-ray, 13:2:117
Impact of lasers in spectroscopy, 13:6:476
Improved acquisition of targets seen against the daylight sky, 13:2:105
Improved oblique-incidence interferometer, 14:3:257; Addendum 14:6:535
Improvement by step biasing in holographic interferometry, sensitivity, 14:4:372
Incidence interferometer, improved oblique-, 14:3:257
Infinite conjugate testing, 12-inch aperture folded MTF analyzer for, 14:1:81
Information processing, optical and digital, 13:3:172
Infrared atmospheric effects, 14:1:31
Infrared detector developments for future remote sensor applications, recent, 14:4:351
Infrared detectors—an overview, 14:1:21
Infrared laser spectra by means of holography, method to measure pulsed, 14:3:208
Infrared lasers, tunable, 13:6:516
Infrared lenses of high aperture and performance, thermal, 14:2:141
Infrared optical systems, performance evaluation of scanning, 14:1:6
Infrared sensors, design tradeoffs for scanning, 14:1:15
Infrared spaceborne sensor calibration, status of long wavelength, 14:1:38
Infrared spectroscopic detection of atmospheric pollutants, long path, 13:1:15
Infrared systems, cryogenic coolers for, 14:1:57
Infrared today and tomorrow—plus 11 years, 14:1:5
Infrared transmission and background calculations, computer program for atmospheric, 13:2:92
Infrared, TV-compatible forward looking, 13:4:335
Injection laser as reference source in cryogenic interferometry, application of, 13:4:322
Instrument engineered for people, lens measuring, 13:3:275
Instrument for measuring apparent directional reflectance, portable, 14:3:244
Instrumentation in medicine, applications of optical, 13:2:116
Instruments around new types of holographic diffraction grating, designing new generation of analytical, 14:5:420
Intensification and video recording system for astronomical observations, image, 14:1:76
Intensity, velocity, and magnetic fields, cinematography of solar, 14:1:64
Interferometer, improved oblique-incidence, 14:3:257
Interferometer spectrometer, cryogenic, 13:4:316
Interferometry and its application to position sensing, amplitude distribution measurement using heterodyne, 13:5:455
Interferometry, application of injection laser as reference source in cryogenic, 13:4:322
Interferometry, practice of, 14:2:124
Interferometry, review of speckle photography and, 14:5:482
Interferometry, sensitivity improvement by step biasing in holographic, 14:4:372
Interlaboratory comparisons of MTF measurements and calculations and OTF standards in Germany, 14:2:151
Interpolation using electro-optic crystals, high frequency moire fringe, 14:3:259
In vivo applications of holographic microscopy, 14:3:206
In-water camera systems, backscatter reduction for artificially illuminated, 14:4:357
Isotope separation, laser, 13:6:506
Isotropic media, diffraction of light by sound waves in optically, 14:1:91

Japan, standards of OTF in, 14:2:161

Kinetic spectroscopy, applications of lasers to 13:6:489
Kinoforms, synthetic holograms and,14:3:195

Laboratory, optical, 14:3:192
Landsat, four- and five-band multispectral scanners for, 14:4:312
Large-aperture ground-based telescope design and fabrication, 14:6:520
Large lightweight mirror of unusual shape, optical fabrication of a, 14:6:514
Large objects, high sensitivity moire grid technique for studying deformation in,14:2:178
Large objects using stereo pairs, generation of pseudo Fizeau fringes on, 13:3:279
Large optical system, asymptote analysis of a, 14:6:536
Large optical systems, 14:6:513
Large space telescope, 14:2:107
Large space telescope, analysis and experimental measurement of stravlight suppression systems for the, 14:6:528
Laser and silicon avalanche detectors to optical communications, application of GaAs, 13:5:389
Laser as reference source in cryogenic interferometry, application of injection, 13:4:322
Laser beam parameters, application of local reference beam holography to study of, 13:4:347
Laser beam shaper with a phase step, anamorphic, 13:4:331
Laser communication system suitable for transmission of color television and data, wideband He-Ne, 13:5:383
Laser diodes for room-temperature operation, heterojunction, 13:5:416
Laser device, electronically scannable semiconductor, 14:3:248
Laser, etalon/grating synchronized scanning of a narrowband pulsed dye, 13:6:528
Laser, frequency stabilization of a CW dye, 13:6:531
Laser holographic system for exploding bridge wire analysis, use of multiple cavity, 14:1:69
Laser-induced fluorescent decay spectra—new form of environment signature, 13:6:494
Laser isotope separation, 13:6:506
Laser line-scanning sensors, 14:2:116
Laser polar nephelometer for airborne measurements of aerosol optical properties, 14:1:85
Laser pulses, application of lock-in amplifier for detecting nanosecond dye, 13:2:154
Laser spectra by means of holography, method to measure pulsed infrared, 14:3:208
Laser spectroscopy, 13:6:474
Laser techniques for high-resolution spectroscopy, scanning single-frequency CW dye, 13:6:523
Lasers in spectroscopy, impact of, 13:6:476
Lasers to kinetic spectroscopy, applications of, 13:6:489
Lasers, tunable infrared, 13:6:516
Lateral displacement, on fringes of defocusing and fringes of, 14:3:264
Law enforcement use, standard for passive night vision devices for, 13:2:162
Lens measuring instrument—engineered for people, 13:3:275
Lens optics for film MTF evaluations, microdensitometer without, 13:6:553
Lenses of high aperture and performance, thermal infrared, 14:2:141
Lenses, progress in UK toward objective standards for air camera, 14:2:157
Lidar, air pollution field studies with Raman, 13:1:5
Light by sound waves in optically isotropic media, diffraction of, 14:1:91
Light image converter—hybrid field effect crystal light valve, new real-time non-coherent to coherent, 14:3:217
Light valve, new real-time non-coherent to coherent light image converter—hybrid field effect crystal, 14:3:217
Lightweight mirror of unusual shape, optical fabrication of a large, 14:6:514
Line discriminator (FLD II) for airborne and orbital remote sensing of solar-stimulated luminescence, MK II Fraunhofer, 14:4:339
Line-scanning sensors, laser, 14:2:116
Linear microdensitometry, sampling aperture for, 13:5:460
Local reference beam holography to study of laser beam parameters, application of, 13:4:347
Lock-in amplifier for detecting nanosecond dye laser pulses, application of a, 13:2:154
Long path infrared spectroscopic detection of atmospheric pollutants, 13:1:15
Long wavelength infrared spaceborne sensor calibration, status of, 14:1:38
Longwave holograms—feasibility study, three-dimensional image reconstruction from, 14:3:200
Los Alamos Scientific Laboratory, computerized image analysis at, 14:1:73
Lower atmosphere composition and temperature experiment, 13:4:303
Luminescence, MK II Fraunhofer line discriminator (FLD II) for airborne and orbital remote sensing of solar-stimulated, 14:4:339

Magnesium fluoride, thermal and ultrasonic properties of hot-pressed cadmium sulfide and hot-pressed, 13:1:44
Magnetic fields, cinematography of solar intensity, velocity, and, 14:1:64
Magnifier, catadioptric, 13:6:550
Map display, holographic moving, 13:5:435
Mapping, coherent optics in, 14:3:210
Mapping, coherent optics in, 14:3:211
Mapping, coherent optics—potential applications to, 13:5:440
Mapping spectrometer (SBUV/TOMS) for NIMBUS G, solar backscatter ultraviolet and total ozone, 14:4:323
Mask aligners, new concepts in projection, 14:2:130
Materials—a review, holographic recording, 14:5:393
Mathematical operations by optical processing, 13:3:196
Measure pulsed infrared laser spectra by means of holography, method to, 14:3:208
Measurement by oculometer technique, fixation point, 13:4:339
Measurement of aerosol particle characteristics and their significance to meteorology, remote, 14:4:332
Measurement of aqueous acid solutions, Raman technique for remote, 13:6:502
Measurement of straylight suppression systems for the large space telescope, analysis and experimental, 14:6:528
Measurement systems, apparent rotational amplification in, 14:4:375
Measurement using coherent optics, parallax, 14:3:226
Measurement using heterodyne interferometry and its application to position sensing, amplitude distribution, 13:5:455
Measurements and calculations and OTF standards in Germany, interlaboratory comparisons of MTF, 14:2:151
Measurements of aerosol optical properties, laser polar nephelometer for airborne, 14:1:85
Measuring apparent directional reflectance, portable instrument for, 14:3:244
Measuring instrument engineered for people, lens, 13:3:275
Media, diffraction of light by sound waves in optically isotropic, 14:1:91
Media, holographic techniques for recording of electrical signals on moving storage, 14:3:232
Medicine, applications of optical instrumentation in, 13:2:116
Medicine, imaging with pressurized multiwire proportional chambers, nuclear, 13:2:126
Memories, holographic, 14:5:453
Metal mirrors in the large, 14:6:559
Meteorological satellite program, defense, 14:4:273
Meteorological sensor H—optical subsystem, DMSP Block 5D special, 14:4:284
Meteorology, remote measurement of aerosol particle characteristics and their significance to, 14:4:332
Method to measure pulsed infrared laser spectra by means of holography, 14:3:208
Microdensitometer, design and testing of a pneumatic focus servo for a high-speed, 14:4:366
Microdensitometer without lens optics for film MTF evaluations, 13:6:553
Microdensitometry, sampling aperture for linear, 13:5:460
Microscopy, in vivo applications of holographic, 14:3:206
Microwave holography and imaging of remote moving objects, high resolution, 14:5:499
Mirror, fabrication and test of 1.8 meter diameter high quality ULE, 14:6:539
Mirror of unusual shape, optical fabrication of large lightweight, 14:6:514

Mirror scatter, some observations of empirical 13:4:327
Mirror shapes, new technique for controlling optical, 14:2:112
Mirror space telescope, three-, 14:6:533
Mirror under angular acceleration, deflection of circular scanning, 14:1:46
Mirrors in the large, metal, 14:6:559
MK II Fraunhofer line discriminator (FLD II) for airborne and orbital remote sensing of solar-stimulated luminescence, 14:4:339
MMT optics, current status of the, 14:6:544
Model of human eye, caustic and analytical illuminance calculations for a, 14:3:237
Modern optical communications, 13:5:372
Moire fringe interpolation using electro-optic crystals, high frequency, 14:3:259
Moire grid technique for studying deformation in large objects, high sensitivity, 14:2:178
Monochromators, spectrometers, and spectrographs, theory and principles of, 13:1:23
Monte Carlo approach to optical analysis, 13:4:299
Moving map display, holographic, 13:5:435
Moving objects, high resolution microwave, holography and imaging of remote,14:5:499
Moving storage media, holographic techniques for recording of electrical signals on, 14:3:232
MTF analyzer for infinite conjugate testing, 12-inch aperture folded, 14:1:81
MTF evaluations, microdensitometer without lens optics for film, 13:6:553
MTF measurements and calculations and OTF standards in Germany, interlaboratory comparisons of, 14:2:151
Multiband camera, single-lens, 14:4:347
Multiple cavity laser holographic system for exploding bridge wire analysis, use of, 14:1:69
Multispectral scanner (S-192)—optical design and operational imagery, Skylab, 13:4:292
Multispectral scanners for Landsat, four- and five-band, 14:4:312
Multiwire proportional chambers, nuclear medicine imaging with pressurized,13:2:126

Nanosecond dye laser pulses, application of a lock-in amplifier for detecting, 13:2:154
Narrowband pulsed dye laser, etalon/grating synchronized scanning of a, 13:6:528
Nephelometer for airborne measurements of aerosol optical properties, laser polar, 14:1:85
New concepts in projection mask aligners, 14:2:130
New developments in optical fabrication techniques, 14:2:145
New generation of analytical instruments around new types of holographic diffraction grating, designing a, 14:5:420
New real-time non-coherent to coherent light image converter—hybrid field effect crystal light valve, 14:3:217
New technique for controlling optical mirror shapes, 14:2:112
New types of holographic diffraction grating, designing new generation of analytical instruments around, 14:5:420
Night vision devices for law enforcement use, standard for passive, 13:2:162
NIMBUS G, solar backscatter ultraviolet and total ozone mapping spectrometer (SBUV/TOMS) for, 14:4:323
Noise, image processing in signal-dependent, 13:3:258
Non-coherent to coherent light image converter—hybrid field effect crystal light valve, new real-time, 14:3:217
Non-perfect imaging devices, problems of OTF standardization for, 14:2:169
Nuclear medicine imaging with pressurized multiwire proportional chambers, 13:2:126

Objective standards for air camera lenses, progress in UK toward, 14:2:157
Objects, high resolution microwave holography and imaging of remote moving, 14:5:499
Objects, high sensitivity moire grid technique for studying deformation in large, 14:2:178
Objects using stereo pairs, generation of pseudo Fizeau fringes on large, 13:3:279
Oblique incidence interferometer, improved, 14:3:257
Observations, image intensification and video recording system for astronomical, 14:1:76
Observations of empirical mirror scatter, some 13:4:327
Observations, remote sensing for earth, 14:4:271
Observatory, orbiting astronomical, 14:2:133
Observatory satellite, optical concept generation for synchronous earth, 14:4:295
Observing telescopes, effects of out-of-field radiation on earth-, 14:4:305
Oculometer technique, fixation point measurement by, 13:4:339
On fringes of defocusing and fringes of lateral displacement, 14:3:264
1.8 meter diameter high quality ULE mirror, fabrication and test of, 14:6:539
Operational imagery, Skylab multispectral scanner(S-192)—optical design and,13:4:292
Optic crystals, high frequency moire fringe interpolation using electro-, 14:3:259
Optic, system and production engineering of a beryllium, 13:4:354
Optical analysis, Monte Carlo approach to, 13:4:299
Optical and digital information processing, 13:3:172
Optical communication systems for short-haul applications, 13:5:409
Optical communications, application of GaAs laser and silicon avalanche detectors to, 13:5:389
Optical communications in space, 13:5:374
Optical communications, modern, 13:5:372
Optical communications set, tactical, 13:5:401
Optical components, computer-generated holograms as generalized, 14:5:426
Optical concept generation for synchronous earth observatory satellite, 14:4:295
Optical design and operational imagery, Skylab multispectral scanner (S-192), 13:4:292
Optical-digital image processing system, 13:3:243
Optical-digital system for automatic processing of chest x-rays, 13:3:250
Optical elements, holographic, 14:5:408
Optical engineering, 13:1:4
Optical engineering at Avco Everett Research Laboratory, 13:2:74
Optical fabrication of large lightweight mirror of unusual shape, 14:6:514
Optical fabrication techniques, new developments in, 14:2:145
Optical image subtraction, 14:5:436
Optical imagery, digital processing of synthetic aperture, 13:3:267
Optical instrumentation in medicine, applications of, 13:2:116
Optical laboratory, 14:3:192
Optical mirror shapes, new technique for controlling, 14:2:112
Optical processing, mathematical operations by, 13:3:196
Optical processing systems, prom device in, 13:3:235
Optical properties, laser polar nephelometer for airborne measurements of aerosol, 14:1:85
Optical sensing from geosynchronous orbit, scanning system tradeoffs for remote, 14:4:289
Optical sources, rejection of out-of-field, 13:4:343
Optical spatial filtering, restoration of radiologic images by, 13:3:208
Optical subsystem, DMSP Block 5D special meteorological sensor H-, 14:4:284
Optical subsystem for DMSP Block 5D, primary, 14:4:279
Optical support structure, design of highly stable, 14:6:552
Optical system, asymptote analysis of a large, 14:6:536
Optical systems, coherent, 14:3:191
Optical systems, large, 14:6:513
Optical systems, performance evaluation of scanning IR, 14:1:6
Optical transmission system for television signals, short-range, 13:5:396
Optical transmission systems, review of fiber, 13:5:423
Optically coated silicon solar cells, covering factor of, 14:2:176
Optically isotropic media, diffraction of light by sound waves in, 14:1:91
Optics at Honeywell Radiation Center, history of, 13:4:288
Optics at Perkin-Elmer 14:2:104
Optics, current status of the MMT, 14:6:544
Optics for film MTF evaluations, microdensitometer without lens, 13:6:553
Optics in mapping, coherent, 14:3:210
Optics in mapping, coherent, 14:3:211
Optics in Southern Rocky Mountain region, photo-, 14:1:63
Optics, parallax measurement using coherent, 14:3:226
Optics—potential applications to mapping, coherent, 13:5:440
Optics, terminology and specifications—some unclear aspects of, 14:2:172
Opto-acoustic spectroscopy, 13:6:483
Orbit, scanning system tradeoffs for remote optical sensing from geosynchronous, 14:4:289
Orbital remote sensing of solar-stimulated luminescence, MK II Fraunhofer line discriminator (FLD II) for airborne and, 14:4:339
Orbiting astronomical observatory, 14:2:133
OTF calculation programs, comparison of results of various, 14:2:166
OTF in Japan, standards of, 14:2:161
OTF standard, task force and you, ANSI, 14:2:150
OTF standardization for non-perfect imaging devices, problems of, 14:2:169
OTF standards in Germany, interlaboratory comparisons of MTF measurements and calculations and, 14:2:151
Out-of-field optical sources, rejection of, 13:4:343
Out-of-field radiation on earth-observing telescopes, effects of, 14:4:305
Ozone mapping spectrometer (SBUV/TOMS) for NIMBUS G, solar backscatter ultraviolet and total, 14:4:323

Paraboloids, testing of convex, 14:6:525
Parallax measurement using coherent optics, 14:3:226
Parameters, application of local reference beam holography to study of laser beam, 13:4:347
Partial coherence in imaging systems,13:4:362
Particle characteristics and their significance to meteorology, remote measurement of aerosol, 14:4:332
Particle field holography, 14:5:383
Passive night vision devices for law enforcement use, a standard for, 13:2:162
Performance evaluation of scanning infrared optical systems, 14:1:6
Performance, standards for imaging, 14:2:149
Perkin-Elmer, optics at, 14:2:104
Phase correlation, detection of image coincidence in stereo pairs using, 13:2:147
Phase step, anamorphic laser beam shapes with a, 13:4:331
Photodiodes for communication systems, (Hg,Cd)Te, 13:4:312
Photogrammetry, holographic applications in, 14:5:448
Photography, airborne telescope-camera system for high-resolution reentry vehicle, 13:2:98
Photography and interferometry, review of speckle, 14:5:482
Photo-optics in Southern Rocky Mountain region, 14:1:63
Pneumatic focus servo for high-speed microdensitometer, design and testing of a, 14:4:366
Point measurement by oculometer technique, fixation, 13:4:339
Polar nephelometer for airborne measurements of aerosol optical properties, laser, 14:1:85
Pollutants, long path infrared spectroscopic detection of atmospheric, 13:1:15
Pollution, field studies with a Raman lidar air, 13:1:5
Portable instrument for measuring apparent directional reflectance, 14:3:244
Position sensing, amplitude distribution measurement using heterodyne interferometry and its application to, 13:5:455
Potential applications to mapping, coherent optics-, 13:5:440
Practice of interferometry, 14:2:124
Pressurized multiwire proportional chambers, nuclear medicine imaging with, 13:2:126
Primary optical subsystem for DMSP Block 5D, 14:4:279
Probing of a volume at finite conjugates, remote, 13:2:79
Problems of OTF standardization for non-perfect imaging devices, 14:2:169
Processing, mathematical operations by optical, 13:3:196

Processing of annular coded-aperture imagery, digital, 14:5:490
Processing of chest x-rays, optical-digital system for automatic, 13:3:250
Processing in signal-dependent noise, image, 13:3:258
Processing of synthetic aperture optical imagery, digital, 13:3:267
Processing, optical and digital information, 13:3:172
Processing system, optical-digital image, 13:3:243
Processing systems, prom device in optical, 13:3:235
Processor, hybrid image, 13:3:228
Production engineering of a beryllium optic, system and, 13:4:354
Program, defense meteorological satellite, 14:4:273
Programs, comparison of results of various OTF calculation, 14:2:166
Progress in UK toward objective standards for air camera lenses, 14:2:157
Projection mask aligners, new concepts in, 14:2:130
Prom device in optical processing systems, 13:3:235
Properties, laser polar nephelometer for airborne measurements of aerosol optical, 14:1:85
Proportional chambers, nuclear medicine imaging with pressurized multiwire, 13:2:126
Pseudo Fizeau fringes on large objects using stereo pairs, generation of, 13:3:279
Pulsed dye laser, etalon/grating synchronized scanning of a narrowband, 13:6:528
Pulsed infrared laser spectra by means of holography, method to measure, 14:3:208

Radiation on earth-observing telescopes, effects of out-of-field, 14:4:305
Radiologic images by optical spatial filtering, restoration of, 13:3:208
Radiological transmission image for categorizing image enhancement procedures, use of a general description of the, 13:2:134
Raman lidar, air pollution field studies with a, 13:1:5
Raman technique for remote measurement of aqueous acid solutions, 13:6:502
Real-time non-coherent to coherent light image converter—hybrid field effect crystal light valve, new, 14:3:217
Recent approaches to computer-generated holograms, 13:3:189
Recent infrared detector developments for future remote sensor applications, 14:4:351
Reconstruction from longwave holograms—a feasibility study, three-dimensional image, 14:3:200
Recording materials—a review, holographic, 14:5:393
Recording of electrical signals on moving storage media, holographic techniques for, 14:3:232
Recording system for astronomical observations, image intensification and video, 14:1:76
Reduction for artificially illuminated in-water camera systems, backscatter, 14:4:357
Reentry vehicle photography, airborne telescope-camera system for high-resolution, 13:2:98
Reference beam holography to study of laser beam parameters, application of local, 13:4:347
Reference source in cryogenic interferometry, application of injection laser as, 13:4:322
Reflectance, portable instrument for measuring apparent directional, 14:3:244
Rejection of out-of-field optical sources, 13:4:343
Remote measurement of aerosol particle characteristics and their significance to meteorology, 14:4:332
Remote measurement of aqueous acid solutions, Raman technique for, 13:6:502
Remote moving objects, high resolution microwave holography and imaging of, 14:5:499
Remote optical sensing from geosynchronous orbit, scanning system tradeoffs for, 14:4:289
Remote probing of a volume at finite conjugates, 13:2:79
Remote sensing for earth observations, 14:4:271
Remote sensing of solar-stimulated luminescence, MK II Fraunhofer line discriminator (FLD II) for airborne and orbital, 14:4:339
Remote sensor applications, recent infrared detector developments for future, 14:4:351
Resolution tester, U.S.Air Force aerial camera 14:2:120
Resonators, useful beam quality by design curves for unstable, 13:2:87
Restoration of radiologic images by optical spatial filtering, 13:3:208. Errata 13:6:522
Results of various OTF calculation programs, comparison of, 14:2:166
Retrieval, holographic data storage and, 13:5:429
Review, holographic displays—a, 14:5:402
Review, holographic recording materials—a, 14:5:393
Review of fiber optical transmission systems, 13:5:423
Review of speckle photography and interferometry, 14:5:482
Rocky Mountain region, photo-optics in the Southern, 14:1:63
Room-temperature operation, heterojunction laser diodes for, 13:5:416
Rotational amplification in measurement systems, apparent, 14:4:375

Sampling aperture for linear microdensitometry, 13:5:460
Satellite, optical concept generation for synchronous earth observatory, 14:4:295
Satellite program, defense meteorological, 14:4:273
(SBUV/TOMS) for NIMBUS G, solar backscatter ultraviolet and total ozone mapping spectrometer, 14:4:323
Scannable semiconductor laser device, electronically, 14:3:248
Scanner (S-192)—optical design and operational imagery, Skylab multispectral, 13:4:292
Scanners for Landsat, four- and five-band multispectral, 14:4:312
Scanning infrared sensors, design tradeoffs for, 14:1:15
Scanning infrared optical systems, performance evaluation of, 14:1:6
Scanning mirror under angular acceleration, deflection of circular, 14:1:46
Scanning of a narrowband pulsed dye laser, etalon/grating synchronized, 13:6:528
Scanning sensors, laser line-, 14:2:116
Scanning single frequency CW dye laser techniques for high-resolution spectroscopy, 13:6:523
Scanning spectrometer, electronic, 14:3:251
Scanning system tradeoffs for remote optical sensing from geosynchronous orbit,14:4:289
Scatter, some observations of empirical mirror 13:4:327
Semiconductor laser device, electronically scannable, 14:3:248
Sensing, amplitude distribution measurement using heterodyne interferometry and its application to position, 13:5:455
Sensing for earth observations, remote, 14:4:271
Sensing from geosynchronous orbit, scanning system tradeoffs for remote optical, 15:4:289
Sensing of solar-stimulated luminescence, MK II Fraunhofer line discriminator (FLD II) for airborne and orbital remote, 14:4:339
Sensitivity improvement by step-biasing in holographic interferometry, 14:4:372
Sensitivity moire grid technique for studying deformation in large objects, high, 14:2:178
Sensor applications, recent infrared detector developments for future remote, 14:4:351
Sensor calibration, status of long wavelength infrared spaceborne, 14:1:38
Sensor H—optical subsystem, DMSP Block 5D special meteorological, 14:4:284
Sensors, design tradeoffs for scanning infrared 14:1:15
Sensors, laser line-scanning, 14:2:116
Separation, laser isotope, 13:6:506
Servo for high-speed microdensitometer, design and testing of pneumatic focus, 14:4:366
Set, tactical optical communications,13:5:401
Shadowgraph visualization of boundary-layer transition in aeroballistic range studies, focused, 13:2:143
Shaper with phase step, anamorphic laser beam, 13:4:331
Shapes, new technique for controlling optical mirror, 14:2:112
Short communications, 14:3:263
Short-haul applications, optical communication systems for, 13:5:409
Short-range optical transmission system for television signals, 13:5:396
Signal-dependent noise, image processing in, 13:3:258
Signal/noise in analog and binary holograms, 13:3:219
Signals on moving storage media, holographic techniques for recording of electrical, 14:3:232
Signals, short-range optical transmission system for television, 13:5:396
Signature, laser-induced fluorescent decay spectra—new form of environment, 13:6:494
Significance to meteorology, remote measurement of aerosol particle characteristics and their, 14:4:332
Silicon avalanche detectors to optical communications, application of GaAs laser and, 13:5:389
Silicon solar cells, covering factor of optically coated, 14:2:176
Single-ended atmospheric transmissometer, 13:1:10
Single frequency CW dye laser techniques for high-resolution spectroscopy, scanning, 13:6:523
Single-lens multiband camera, 14:4:347
Sky, improved acquisition of target seen against the daylight, 13:2:105
Skylab multispectral scanner (S-192)—optical design and operational imagery, 13:4:292
Solar backscatter ultraviolet and total ozone mapping spectrometer (SBUV/TOMS) for NIMBUS G, 14:4:323
Solar cells, covering factor of optically coated silicon, 14:2:176
Solar intensity, velocity, and magnetic fields, cinematography of, 14:1:64
Solar-stimulated luminescence, MK II Fraunhofer line discriminator(FLD II) for airborne and orbital remote sensing of, 14:4:339
Solutions, Raman technique for remote measurement of aqueous acid, 13:6:502
Some observations of empirical mirror scatter, 13:4:327
Sound waves in optically isotropic media, diffraction of light by, 14:1:91
Source in cryogenic interferometry, application of injection laser as reference, 13:4:322
(S-192)—optical design and operational imagery, Skylab multispectral scanner, 13:4:292
Sources, rejection of out-of-field optical, 13:4:343
Southern Rocky Mountain region, photo-optics in the, 14:1:63
Space, optical communications in, 13:5:374
Space telescope, analysis and experimental measurement of straylight suppression systems for the large, 14:6:528
Space telescope, large, 14:2:107
Space telescope, three-mirror, 14:6:533
Spaceborne sensor calibration, status of long wavelength infrared, 14:1:38
Spatial filtering by digital holography, 13:3:175
Spatial filtering, restoration of radiologic images by optical, 13:3:208
Special meteorological sensor H—optical subsystem, DMSP Block 5D, 14:4:284
Specifications—some unclear aspects of optics, terminology and, 14:2:172
Speckle photography and interferometry, review of, 14:5:482
Spectra—new form of environment signature, laser-induced fluorescent decay, 13:6:494
Spectra by means of holography, method to measure pulsed infrared laser, 14:3:208
Spectrographs, theory and principles of monochromators, spectrometers, and, 13:1:23
Spectrometer, cryogenic interferometer, 13:4:316
Spectrometer, electronic scanning, 14:3:251
Spectrometer (SBUV/TOMS) for NIMBUS G, solar backscatter ultraviolet and total ozone mapping, 14:4:323
Spectrometers and spectrographs, theory and principles of monochromators, 13:1:23
Spectroscopic detection of atmospheric pollutants, long path infrared, 13:1:15
Spectroscopy, applications of lasers to kinetic 13:6:489
Spectroscopy, holographic, 13:6:481
Spectroscopy, impact of lasers in, 13:6:476

Spectroscopy, laser, 13:6:474
Spectroscopy, opto-acoustic, 13:6:483
Spectroscopy, scanning single-frequency CW dye laser techniques for high-resolution, 13:6:523
Stabilization of a CW dye laser, frequency, 13:6:531
Standard for passive night vision devices for law enforcement use, 13:2:162
Standard, task force and you, ANSI, OTF, 14:2:150
Standardization for non-perfect imaging devices, problems of OTF, 14:2:169
Standards for air camera lenses, progress in UK toward objective, 14:2:157
Standards for imaging performance,14:2:149
Standards in Germany, interlaboratory comparisons of MTF measurements and calculations and OTF, 14:2:151
Standards of OTF in Japan, 14:2:161
State-of-the-art for thermal imaging, 14:1:50
Status of long wavelength infrared spaceborne sensor calibration, 14:1:38
Status of MMT optics, current, 14:6:544
Step biasing in holographic interferometry, sensitivity improvement by, 14:4:372
Stereo pairs, generation of pseudo Fizeau fringes on large objects using, 13:3:279
Stereo pairs using phase correlation, detection of image coincidence in, 13:2:147
Stigmatic telescopes, unobscured aperture, 13:6:534
Stochastic apertures, coded aperture gamma-ray imaging with, 13:2:117
Storage and retrieval, holographic data, 13:5:429
Storage media, holographic techniques for recording of electrical signals on moving, 14:3:232
Straylight suppression systems for large space telescope, analysis and experimental measurement of, 14:6:528
Structural components, holography applied to 14:5:460
Structure, design of highly stable optical support, 14:6:552
Study of laser beam parameters, application of local reference beam holography to, 13:4:347
Study, three-dimensional image reconstruction from longwave holograms—feasibility, 14:3:200
Studying deformation in large objects, high sensitivity moire grid technique for, 14:2:178
Subsystem, DMSP Block 5D special meteorological sensor H—optical, 14:4:284
Subsystem for DMSP Block 5D, primary optical, 14:4:279
Subtraction, optical image, 14:5:436
Support structure, design of highly stable optical, 14:6:552
Suppression systems for large space telescope, analysis and experimental measurement of straylight, 14:6:528
Synchronized scanning of narrowband pulsed dye laser, etalon/grating, 13:6:528
Synchronous earth observatory satellite, optical concept generation for, 14:4:295
Synthetic aperture optical imagery, digital processing of, 13:3:267
Synthetic holograms and kinoforms,14:3:195
System and production engineering of a beryllium optic, 13:4:354
System, asymptote analysis of a large optical, 14:6:536
System for astronomical observations, image intensification and video recording, 14:1:76
System for automatic processing of chest x-rays, optical-digital, 13:3:250
System for exploding bridge wire analysis, use of multiple cavity laser holographic, 14:1:69
System for television signals, short-range optical transmission, 13:5:396
System, optical-digital image processing, 13:3:243
System suitable for transmission of color television and data, wideband He-Ne laser communication, 13:5:383
System tradeoffs for remote optical sensing from geosynchronous orbit, scanning, 14:4:289
Systems, apodization of coherent imaging, 13:5:451
Systems, apparent rotational amplification in measurement, 14:4:375
Systems, backscatter reduction for artificially illuminated in-water camera, 14:4:357
Systems, coherent optical, 14:3:191
Systems, cryogenic coolers for infrared, 14:1:57
Systems for large space telescope, analysis and experimental measurement of straylight suppression, 14:6:528
Systems for short-haul applications, optical communication, 13:5:409
Systems, (Hg,Cd)Te photodiodes for communication, 13:4:312
Systems, large optical, 14:6:513
Systems, partial coherence in imaging, 13:4:362
Systems, performance evaluation of scanning IR optical, 14:1:6
Systems, prom device in optical processing, 13:3:235
Systems, review of fiber optical transmission, 13:5:423

Tactical optical communications set,13:5:401
Targets seen against the daylight sky, improved acquisition of, 13:2:105
Task force and you, ANSI, OTF standard, 14:2:150
Technique, fixation point measurement by oculometer, 13:4:339
Technique for controlling optical mirror shapes, new, 14:2:112
Technique for remote measurement of aqueous acid solutions, Raman, 13:6:502
Technique for studying deformation in large objects, high sensitivity moire grid,14:2:178
Techniques for high-resolution spectroscopy, scanning single-frequency CW dye laser, 13:6:523
Techniques for recording of electrical signals on moving storage media, holographic, 14:3:232
Techniques, new developments in optical fabrication, 14:2:145
Telescope, analysis and experimental measurement of straylight suppression systems for the large space, 14:6:528
Telescope design and fabrication, large aperture ground based, 14:6:520
Telescope, fabrication of extreme ultraviolet glancing incidence, 13:2:159
Telescope, large space, 14:2:107
Telescope-camera system for high-resolution reentry vehicle photography, airborne, 13:2:98
Telescope, three-mirror space, 14:6:533
Telescopes, effects of out-of-field radiation on earth-observing, 14:4:305
Telescopes, unobscured aperture stigmatic, 13:6:534
Television and data, wideband He-Ne laser communication system suitable for transmission of color, 13:5:383
Television signals, short-range optical transmission system for, 13:5:396
Temperature experiment, lower atmosphere composition and, 13:4:303
Terminology and specifications—some unclear aspects of optics, 14:2:172
Test of 1.8 meter diameter high quality ULE mirror, fabrication and, 14:6:539
Tester, U.S.Air Force aerial camera resolution 14:2:120
Testing of convex paraboloids, 14:6:525
Testing of pneumatic focus servo for high-speed microdensitometer, design and, 14:4:366
Testing, 12-inch aperture folded MTF analyzer for infinite conjugate, 14:1:81
Theory and principles of monochromators, spectrometers, and spectrographs, 13:1:23
Thermal and ultrasonic properties of hot-pressed cadmium sulfide and hot-pressed magnesium fluoride, 13:1:44
Thermal imaging, state-of-the-art for, 14:1:50
Thermal infrared lenses of high aperture and performance, 14:2:141
Three-dimensional image reconstruction from longwave holograms—feasibility study, 14:3:200
Three-mirror space telescope, 14:6:533
Total ozone mapping spectrometer (SBUV/TOMS) for NIMBUS G, solar backscatter ultraviolet and, 14:4:323
Tradeoffs for remote optical sensing from geosynchronous orbit, scanning system, 14:4:289
Tradeoffs for scanning infrared sensors, design, 14:1:15
Transfer functions of xeroradiographs and electronic image enhancement systems, 13:2:130
Transmission and background calculations, computer program for atmospheric infrared, 13:2:92
Transmission image for categorizing image enhancement procedures, use of general description of the radiological, 13:2:134
Transmission of color television and data, wideband He-Ne laser communication system suitable for, 13:5:383
Transmission system for television signals, short-range optical, 13:5:396
Transmission systems, review of fiber optical, 13:5:423
Transmissometer, a single-ended atmospheric, 13:1:10
Tunable infrared lasers, 13:6:516
TV-compatible forward looking infrared, 13:4:335
12-inch aperture folded MTF analyzer for infinite conjugate testing, 14:1:81
Types of holographic diffraction grating, designing new generation of analytical instruments around new, 14:5:420

ULE mirror, fabrication and test of 1.8 meter diameter high quality, 14:6:539
Ultrasonic properties of hot-pressed cadmium sulfide and hot-pressed magnesium fluoride, thermal and, 13:1:44
Ultraviolet and total ozone mapping spectrometer (SBUV/TOMS) for NIMBUS G, solar backscatter, 14:4:323
Ultraviolet glancing incidence telescope, fabrication of extreme, 13:2:159
United Kingdom toward objective standards for air camera lenses, progress in the, 14:2:157
Unobscured aperture stigmatic telescopes, 13:6:534
U.S. Air Force aerial camera resolution tester, 14:2:120
Use of general description of radiological transmission image for categorizing image enhancement procedures, 13:2:134
Use of multiple cavity laser holographic system for exploding bridge wire analysis, 14:1:69
Useful beam quality by design curves for unstable resonators, 13:2:87

Valve, new real-time non-coherent to coherent light image converter—hybrid field effect crystal light, 14:3:217
Various OTF calculation programs, comparison of results of, 14:2:166
Vehicle photography, airborne telescope-camera system for high-resolution, 13:2:98
Velocity and magnetic fields, cinematography of solar intensity, 14:1:64
Video recording system for astronomical observations, image intensification and, 14:1:76
Vidicons, automatic background compensation device for, 14:3:241
Visualization holography, low, 14:5:470
Visualization of boundary-layer transition in aeroballistic range studies, focused shadowgraph, 13:2:143

Waves in optically isotropic media, diffraction of light by sound, 14:1:91
Wide bandwidth (Hg,Cd)Te detectors, high performance, 13:4:307
Wideband He-Ne laser communication system suitable for transmission of color television and data, 13:5:383
Wire analysis, use of multiple cavity laser holographic system for exploding bridge, 14:1:69

Xeroradiographs and electronic image enhancement systems, transfer functions of, 13:2:130
X-rays, optical-digital system for automatic processing of chest, 13:3:250
